

Technical and Market Support for Carbon Filler from Plasma Process

Overview

A client required assistance characterising their current product and developing a production process and market for a final product.

Objectives

- Gain a Quick Understanding of Client Product and Process
- Initiate a Product Assessment Program
- Assist in Further Process and Product Development for Target Market/s

Scope

- Review Current Process
- Review Currently Available Information (Process & Product)
- Devise and Implement Characterisation Program
- Inform on Product and Process Developments for Target Market/s

Actions

- Client provided all current data for review followed by a two-way exchange
- A forward characterisation plan was put in place and executed
- Market Potential for Current and Future Developed Product was Assessed
- Scale Process Development was Investigated

Outcome

The client gained an additional understanding of the current and future potential of its product. This provided a solid baseline for future development.
